When we were working on the NSPS proposal last summer, I was saving "snapshots" of th sharepoint file every day or two. I don't blame you.

I'll take a gander. Thanks.

I am actively working on revisions and addressing OAR comments on the version on the SharePoint, if you get bored or curious before we talk on Friday. The current version from earlier today will be saved to our regional restricted share drive when I return to the office tomorrow (I had already planned to save it regardless of Dee's advice).

News to me. And from my experience around here, saving the current version is good advice from Dee.
